

### Content Hub works with :

Alfresco  
 Box.net  
 EMC CenterStage  
 EMC Documentum Content Server  
 EMC Documentum eRoom  
 Enovia MatrixOne  
 File Systems NTLM  
 FTP  
 HP Trim Context  
 IBM Content Manager  
 IBM DB2 CMOD  
 IBM Enterprise Records  
 IBM FileNET CS  
 IBM FileNET IS  
 IBM FileNET P8  
 IBM Connections  
 IBM Lotus Notes  
 IBM Web Content Management  
 IBM WebSphere Portal PDM  
 Interwoven TeamSite  
 Interwoven WorkSite NT  
 Iron Mountain  
 JCR  
 Lotus Quickplace  
 Lotus QuickR  
 Microsoft Exchange  
 Microsoft SharePoint  
 Open Text eDocs  
 Open Text LiveLink  
 Vignette  
 Oracle Stellent UCM  
 SAP KM  
 Symantec Enterprise Vault  
 WebDAV server  
 Xerox Docushare

"Bridging the gap between internal applications, disparate content repositories and cloud services has never been easier."

Nicolas Maquaire, EntropySoft CEO

### Working with Multiple Content Repositories?

Common content fragmentation challenges facing IT:

- Synchronizing content repositories
- Archiving documents to the cloud
- Providing access to Cloud document services

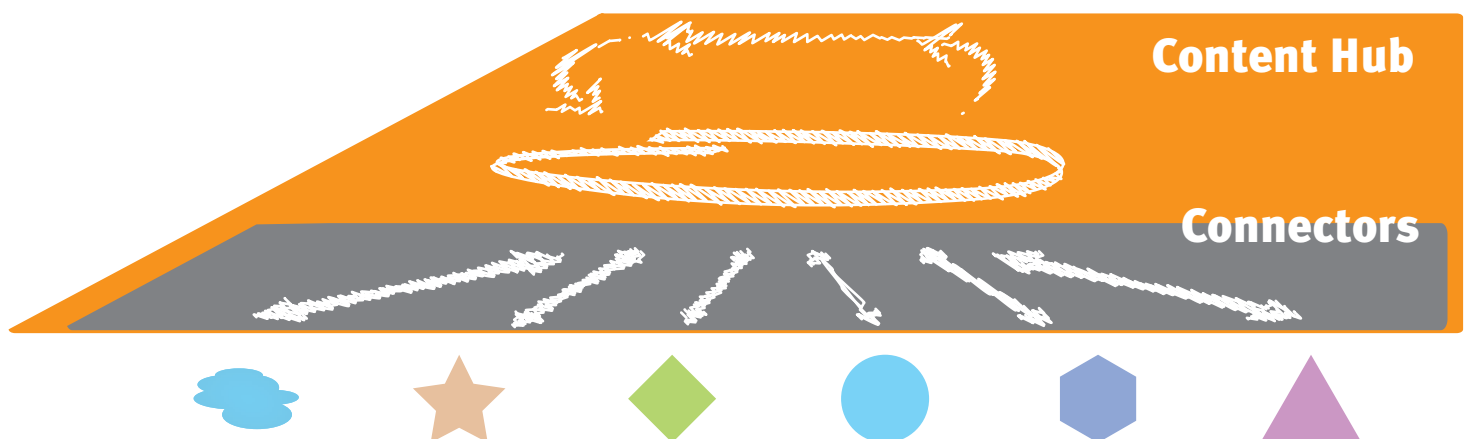

Companies of all sizes need to move and share content. Most have numerous on-premises repositories and find accessing that information difficult. Recent widespread cloud adoption comes both with threats and opportunities - in part because cloud document repositories create more information fragmentation as they enable new ways to collaborate. But the cloud is also delivering a broad array of document services that bring value to the enterprise.

Whether it's archiving documents to a secure platform, synchronizing documents between two enterprise repositories or with the cloud, or using document cloud services the challenge is the same – gaining access and control.

### The Solution is Content Hub Professional Edition

Content Hub Professional is a centralized access point console, linking document repositories wherever they are. This easily installed technology, bridges the gap between internal document management systems and the cloud. Out-of-the-box capabilities make this a turnkey solution and a compulsory check-point for the cloud.

### Any third party product

## Move & Synchronize Content with Ease

In minutes, an administrator can handle classic processes like organizing, migrating and sharing content between repositories deployed on-premises or in the cloud. Thanks to built-in content processes, it's takes just minutes to synchronize two silos or connect applications to a cloud ECM system to engage more efficiently with partners or customers.

## Change the Rules of Collaboration

Mergers, acquisitions, outsourcing, partnerships ...as companies grow, so does the number of people, processes and applications used. There is little chance that everyone is using the same document management system, however, it is becoming increasingly important to share information quickly. Synchronizing two previously non-compatible repositories in real-time it dramatically improves collaboration.

For example, a team in New York is managing its documents with EMC Documentum. Another team of the same company is using Microsoft SharePoint. It's critical for both teams to work on the same documents. By synchronizing both repositories with EntropySoft there is no impact on users, everyone continues to work as usual and everyone has access to the right information at the right time.

This synchronization process can also be done across the firewall with an ECM SaaS application.

## Mitigate Costs

Content Hub Professional Edition is available as pure software or a software appliance. The software appliance pricing is based on a pay as you go model. Everything is pre-installed. You can synchronize silos, integrate SharePoint with legacy applications, or leverage Cloud benefits in a matter of hours. The VMWare software appliance includes automatic upgrades.
