

EntropySoft announced native support for Adobe Flex technology for version 3.5.

Paris, 20th February 2007: EntropySoft is a contributor to the revolution for Web 2.0 users by encouraging the development of new rich applications (RIA and RDA). EntropySoft ECI 3.5 supports Adobe Flex Data Services technology natively. This technological richness allows the EntropySoft client access to its document management infrastructure and process management from a rich client.

EntropySoft ECI has become the new generation explorer for access to all documents and processes.

EntropySoft ECI is an integration and presentation platform. EntropySoft is able to separate the service proposed to the user from the information system architecture. This abstraction layer allows a reorganisation of access to all the business documents and the best use of business data distributed in databases to describe, file and search for these documents.

This abstraction layer allows users of RIA and RDA to browse and work using a reorganised view of their folders and documents whatever the existing infrastructure. They can create and search for documents, start a process or execute a task.

This technology favours innovation. Businesses can implement Web 2.0 ergonomies and have the productivity of a client/server application working in web mode.

EntropySoft makes available to integrators a flex API as well as sophisticated components allowing access to all the functionalities of its platform. This technology eases the implementation of business applications which must interact with the document back office and business processes.

With this new technology, EntropySoft is continuing to transform radically the approach of users and organisations in the management of content. EntropySoft helps you optimize the use of your content assets.

About EntropySoft :

EntropySoft is the European player in the ECI (Enterprise Content Integration) market. EntropySoft is the specialist in the integration of unstructured data. EntropySoft's mission is to optimise the use of a company's documentary resources. EntropySoft Content Federation and Content ETL solutions enable the reorganisation of access to information and the industrialisation of content transfers in the extended enterprise.
