

EntropySoft has announced the availability of the EntropySoft Content ETL solution, the world's first content ETL.

Paris, 14th May 2007 EntropySoft, the European leader in the ECI (Enterprise Content Integration) market, specialist in the integration of unstructured data, announced the release of the world's first content ETL.

This solution meets the need for the industrialisation of content transfers and transformations within or between companies. EntropySoft Content ETL allows the extraction, transformation and loading of content between the applications of the extended enterprise.

Featuring nearly 25 bi-directional connectors, the EntropySoft catalogue offers the possibility of plug and play to connect the main applications on the market.

There are numerous uses. EntropySoft Content ETL can be used for organising and structuring the feeding of an archiving platform. The solution can also be used within the framework of complex migrations involving many severe constraints. EntropySoft Content ETL can also allow the structuring of content exchanges between one or several business partners.

EntropySoft Content ETL fights heterogeneity and division of the information systems while bringing security, reliability and traceability and reinforcing the level of compliance with all current standards.

"We are proud to announce this worldwide premiere. A large number of technological barriers have been overcome to build what we are offering. We believe we are meeting a need that every IT department has", Nicolas Maquaire, EntropySoft chairman explained.

EntropySoft ECI is an integration and presentation platform. This platform is designed for optimising the management of unstructured company data. This optimisation is carried out in two ways. The EntropySoft Content ETL solution works from back office to back office and the EntropySoft Content Federation solution works from the back office to client application.

The EntropySoft Content Federation solution offers the opportunity of reorganising access to all the company's folders and documents. This solution allows you to federate within a single business account all the documents related to it whatever the original applications are. EntropySoft allows you to consolidate access to the information by making the reorganisation of the back office easier and allowing you to concentrate on the business logic without having to worry about the complexity of the back office.

With this worldwide premiere, EntropySoft is continuing to transform radically the approach of users and organisations in the management of content. EntropySoft helps you optimize the use of your content assets.

About EntropySoft :

EntropySoft is the European player in the ECI (Enterprise Content Integration) market. EntropySoft is the specialist in the integration of unstructured data. EntropySoft's mission is to optimise the use of a company's content resources. EntropySoft Content Federation and Content ETL solutions enable the reorganisation of access to information and the industrialisation of content transfers in the extended enterprise.
