

## **EntropySoft announces the availability of its new IBM DB2 Content Manager On Demand connector.**

**Paris, 21th November 2007**, EntropySoft the European leader of the ECI (Enterprise Content Integration) market, specialist in the integration of unstructured data announced the availability of its IBM DB2 Content Manager On Demand connector.

This technology enables all IBM DB2 Content Manager repositories to be connected to the EntropySoft engine in a few clicks. As soon as they are connected, all IBM DB2 Content Manager's content is available for the EntropySoft Content Federation and EntropySoft Content ETL solutions.

EntropySoft uses bi-directional connectors as foundations of its strategy of content interoperability. These connectors implement the main features of all the connected applications. EntropySoft delivers the broadest catalog of bi-directional connectors. On top of these connectors, EntropySoft deliver two solutions.

EntropySoft Content ETL extracts, transforms and loads content between numerous content repositories. This solution is used for Records Management projects to connect and organize transfers of records from all applications into the ERMS solutions, for publishing content or for complex migrations.

EntropySoft Content Federation is based on EntropySoft presentation platform. This platform consolidates all content repositories and delivers federated user interfaces through different technologies. This solution is used by business units of large corporations, to shield users from the complexity of their applications landscape and to give them a business oriented access to content. This unique point of access is independent from the information system architecture. With this new connector, EntropySoft is continuing to transform radically the approach of users and organizations in the management of content. EntropySoft helps you optimize the use of your content assets.

### About EntropySoft:

EntropySoft is the European player in the ECI (Enterprise Content Integration) market. EntropySoft is the specialist in the integration of unstructured data. EntropySoft's mission is to break down technological barriers that hinder the use of companies' content assets. EntropySoft facilitates content interoperability. EntropySoft Content Federation and Content ETL solutions enable the reorganization of access to information and the industrialization of content transfers in the extended enterprise. Leading global organizations like BNP Paribas, Total, Radio France Internationale rely on EntropySoft. For more information: [www.entropysoft.net](http://www.entropysoft.net)
