

EntropySoft announces the availability of an Interwoven WorkSite connector

Paris, August 11th 2008 - EntropySoft, specialist of the ECI market (Enterprise Content Integration) and unstructured data integration, announces the availability of an Interwoven WorkSite connector.

By making available yet another connector, EntropySoft is once more working towards simple, normalized access to all content repositories.

The Interwoven WorkSite connector enhances most of the underlying features of the software, such as security, workspace, document indexing etc...

This connector is part of EntropySoft's connectors portfolio, which consists of more than 25 bidirectional connectors, the biggest offer for connectors on the market.

The plug and play connectors are designed for major applications such as Alfresco, EMC Documentum, FileNET P8, Open Text LiveLink, IBM DB2 Content Manager On Demand...

The Interwoven WorkSite connector complements EntropySoft's Interwoven connector offer, as EntropySoft already has an Interwoven TeamSite connector.

EntropySoft builds its integration strategies on this portfolio of bidirectional connectors. They implement the main features of all connected applications. The connectors simplify the access to content repositories for software companies and large organizations.

EntropySoft leverages this unique portfolio in two exclusive products: Content ETL and Content Federation

- Content ETL extracts, transforms and loads content from various content repositories. This solution is used for Records Management projects in order to increase compliance with regulatory environments.

- EntropySoft Content Federation consolidates all content repositories and delivers a federated access to folders and documents scattered in different repositories. Content Federation is a set of server components that accelerates the content integration by offering to business applications a normalized access to all available content silos and a content federation capacity.

EntropySoft's technology can be implemented in third-party software at each level of data integration. Products are designed for software editors for inclusion in their own applications, empowering their solutions with a strong market differentiator.

About EntropySoft

EntropySoft is focused on the integration of unstructured data and is a pure-player in the ECI global market (Enterprise Content Integration).

An information access expert, EntropySoft's mission is to break down technological barriers that hinder the use of companies content assets and make content interoperability easy.

EntropySoft has the most extensive bidirectional connectors' portfolio in the market and is promoting a disruptive innovation with its Content ETL product.

Leading global organizations like BNP Paribas, Total and Endeca rely on EntropySoft technology. For more information, visit www.entropysoft.net.
