

EntropySoft Signs OEM Agreement with Kazeon

EntropySoft's Catalogue of Content Connectors Extends the Reach of Kazeon Information Server

Paris, – December 1, 2008 – EntropySoft, specialist of the Enterprise Content Integration (ECI) market, today announced a new OEM agreement with Kazeon. Kazeon is integrating a wide selection of bidirectional connectors from EntropySoft into its award winning Information Management Platform. The OEM deal empowers Kazeon customers with expanded, out-of-the-box connectivity for accessing more critical information across the enterprise.

While Kazeon already offers connection with several leading enterprise content databases, the new agreement with EntropySoft will allow Kazeon to expand its portfolio to include connectors for Alfresco, FileNet P8, Hummingbird DM, Interwoven TeamSite, Microsoft SharePoint, IBM Lotus Quickplace – all of which have been fully tested on large implementations in critical business projects.

“With increased pressure on discovering every piece of information inside the enterprise, content access has become a top priority. There are increasing numbers of content silos in a company. Today, we deliver to Kazeon critical connectivity to all these repositories” said Nicolas Maquaire, CEO and co-founder of EntropySoft. “We also bring to this partnership our vast expertise in content-centric applications and interoperability.”

EntropySoft is a connectors' factory. It has more than 30 read/write connectors for unstructured data, possibly the biggest portfolio in the market. The extensive support of features and the richness of the connectors' portfolio make this technology perfect OEM material for many software industries. Already, leading global companies such as Endeca, Coveo, Exalead, or IDS Scheer are using EntropySoft connectors.

On top of the read / write connectors, EntropySoft has two technological layers (Content ETL and Content Federation) that can also be OEM'ed to facilitate integration and interoperability.

EntropySoft's strategy is to work on the completeness of features supported by each connector as well as developing multiple connectors for the same applications in order to best satisfy customer's functional and technical constraints.

EntropySoft's OEM clients have specific requests for their specific markets. This means that the connectors have to have to support the widest range of functionalities. The state-of-the-art connectors therefore help customers focus on their differentiators, allowing them to concentrate on their core business while EntropySoft takes care of the connectivity.

About EntropySoft

EntropySoft is focused on the integration of unstructured data and is a pure-player in the ECI global market (Enterprise Content Integration). An information-access expert, EntropySoft's mission is to facilitate content access and make content interoperability easy.

EntropySoft technology is used by software vendors to simplify the integration between their solution and all content management solutions. Applications fields are numerous (BPM, Enterprise Search, Records Management, Collaboration,...).

EntropySoft has the most extensive bidirectional connectors' portfolio in the market and promotes a disruptive innovation with its Content ETL product.

The following leading global organizations integrate EntropySoft connectors: Endeca, Coveo, Exalead, IDS Scheer...

About Kazeon

Kazeon revolutionizes the way companies perform Information Management and eDiscovery by using the Information Server software to intelligently discover, search & index, classify and act on all electronically stored information. Kazeon provides a full spectrum of Information Management solutions, including proactive and reactive eDiscovery, information security and privacy, records management, governance, risk & compliance, and data management. The Kazeon Information Server software automates key eDiscovery functions – identification, collection, preservation, processing, analysis and review for corporations, service providers, and law firms. Kazeon provides unique in-place legal analysis, review and workflow automation technology as well as legal hold for retaining data in original state. Kazeon has been recognized by various industry forums, including Gartner's eDiscovery MarketScope where Kazeon was rated 'Positive' and the Socha-Gelbmann eDiscovery Survey 2008 where Kazeon was recognized as a Top 5 eDiscovery Software Provider. Kazeon has established partnerships with leading companies, including Fujitsu-Siemens, Google, Network Appliance, Oracle and Symantec. Kazeon provides the industry's highest scalability and performance, more than 17 terabytes (TB) of data per day, while offering the lowest cost, \$4.30 per Gigabyte.
