

Jahia Enterprise Edition v6 Aggregates Multiple Sources of Content with ‘Jahia United Content Bus’

Jahia United Content Bus Taps into Universe of Content

San Francisco, CA [Gilbane Conference] - June 2, 2009—[Jahia](#), the first Web Content Integration software to combine Web Content Management with document and portal features, today unveiled its [United Content Bus](#) as part of the new Jahia Enterprise Edition v6. The Jahia United Content Bus allows enterprise users to manage various types of content, whatever the source, within one simple user interface, including business, collaborative and social application portlets as well as widgets, gadgets, pictures, Microsoft Office files and RSS feeds.

Besides standard CIFS, FTP servers and other JCR-compliant repositories, the Jahia United Content Bus is now open to an impressive list of open source and proprietary document infrastructures thanks to read/write connectors including Alfresco, EMC Documentum, IBM Lotus Notes, IBM FileNet, Interwoven, Microsoft Sharepoint, OpenText, Oracle Stellent and others. The connectivity of these proprietary document sources relies on the integrated scalable connector offering by EntropySoft. With the support of this full array of repositories and ECM software Jahia users now have simultaneous access to more content sources than ever before. By unifying Enterprise content silos within one single interface, Jahia simplifies content interoperability, regardless of the content source, type or technology.

“Thanks to our common vision and complementary technologies, integrating EntropySoft connectors with Jahia United Content Bus was a natural fit,” said Elie Auvray, CEO and co-founder of Jahia. *“Jahia now delivers the first and most complete proprietary and standard content integration offering in the industry, confirming our leadership in the Web Content Management market.”*

“Every day there are more and more content silos. EntropySoft technology simplifies the access to all repositories,” said Nicolas Maquaire, CEO and co-founder of EntropySoft. “The large number of connectors that we have and the completeness of the features included make our technology truly OEM and very attractive to various software markets. We bring to this partnership our outstanding expertise in content-centric applications and our market-leader technology.”

About Jahia

Jahia delivers the first Web Content Integration Software by combining Enterprise Web Content management with Document Management and Portal features. By leveraging state of the art Open Source frameworks and libraries, Jahia offers a complete solution for developing, integrating, delivering and managing content across intranets, extranets and the Internet, with a much lower total cost of ownership than other proprietary systems. Founded in 2002, Jahia is a Swiss-based software vendor headquartered in Geneva with subsidiaries in Paris (France), Washington DC (USA), Klagenfurt (Austria), Montreal (Canada) and Düsseldorf (Germany). Jahia is a global company with over 300 customers in more than 15 countries across the globe. More information is available at www.jahia.com

About EntropySoft

EntropySoft is focused on the integration of unstructured data and is a pure-player in the ECI global market (Enterprise Content Integration). An information-access expert, EntropySoft’s mission is to facilitate content access and make content interoperability easy. EntropySoft technology is used by software vendors to simplify the integration between their solution and all content management solutions. Applications fields are numerous (BPM, Enterprise Search, Records Management, Collaboration, etc.). EntropySoft has the most extensive bidirectional connector portfolio in the market and promotes a disruptive innovation with its Content ETL product. The following leading global organizations integrate EntropySoft connectors: Attivio, Coveo, Endeca, Exalead, IDS Scheer, Image Integration Systems, Kazeon.
