

## **EntropySoft, the Content Integration Company, and eDiscovery Leader, ZyLAB, Announce OEM Agreement**

*EntropySoft's ECM Connectors Increase ZyLAB's Access to Vast Amounts of Unstructured Data within eDiscovery Customer Organizations*

### **San Francisco and Amsterdam, The Netherlands: January 5, 2012 –**

EntropySoft, the content integration company, today announced a technology agreement with global eDiscovery leader, ZyLAB, in which they will integrate EntropySoft Connectors into their eDiscovery and information management solutions. This partnership expands ZyLAB's out-of-the-box access to the vast amounts of unstructured data within organizations, an ability that is crucial in eDiscovery.

"EntropySoft's offering of more than 40 connectors enhances ZyLAB's own portfolio and improves the overall capabilities of our eDiscovery solutions," said Pieter Varkevisser, CEO of ZyLAB. "Partnering with the leader in enterprise content integration also insures that ZyLAB will be able to tap into the ever-increasing number of content silos in the future."

ZyLAB will integrate a portfolio of more than 40 EntropySoft Connectors for all major enterprise content management systems into their eDiscovery solutions. EntropySoft's portfolio of connectors has been fully tested and proven in major business-critical deployment projects where immediate and reliable access to enterprise application repositories is required.

"We are thrilled to partner with globally recognized eDiscovery industry leader ZyLAB," said Nicolas Maquaire, CEO and co-founder of EntropySoft. "In the eDiscovery market, it is vital to collect and act on documents from potentially every single content silo in an organization. When a company like ZyLAB relies on EntropySoft's intensive read/write capacity for optimal connectivity, it reinforces our dedication as specialists to provide the highest quality connectivity available."

## **About ZyLAB**

ZyLAB's industry-leading, modular eDiscovery and enterprise information management solutions enable organizations to manage boundless amounts of enterprise data in any format and language, to mitigate risk, reduce costs, investigate matters and elicit business productivity and intelligence.

The ZyLAB eDiscovery system is directly aligned with the Electronic Discovery Reference Model (EDRM) and the company's products and services are used on an enterprise level by corporations, government agencies, courts, and law firms, as well as on specific projects for legal services, auditing, and accounting providers. ZyLAB systems are also available in a Software-as-a-Service (SaaS) model.

ZyLAB has received numerous industry accolades and is one of the few companies to be positioned as a Leader in Gartner's "Magic Quadrant for Information Access Technology" for 2007, 2008 and 2009. In addition, Gartner has given ZyLAB the highest rating ("Strong Positive") in its "MarketScope for E-Discovery and Litigation Support Vendors" for 2007, 2008 and 2009, as well as a "Visionary" rating in its 2011 "Magic Quadrant for E-Discovery Software".

Headquartered in Amsterdam, the Netherlands and McLean, Virginia, ZyLAB also serves local markets from regional offices in New York, Barcelona, Frankfurt, London, Paris, and Singapore. To learn more about ZyLAB visit [www.zylab.com](http://www.zylab.com).

## **About EntropySoft**

EntropySoft is a content integration software company that connects people and applications to information. EntropySoft's specialized connectivity technology is sold directly to organizations and OEM'd by major software vendors for quick and easy search, access, and simplified integration of various enterprise applications with content management products. Companies worldwide like St. Gobain, Total, BNP Paribas and major financial institutions in the United States use EntropySoft to normalize, centralize and manage their increasing amounts of unstructured data. Global software leaders including EMC Kazeon, Endeca, HP, IDS Scheer and Symantec include EntropySoft in their products. EntropySoft is used in all software markets that need to leverage ECM systems. Application areas include eDiscovery, Enterprise Search, Business Process Management, Records Management, Collaboration, and Data Loss Prevention. [www.entropysoft.net](http://www.entropysoft.net)
